VIDEO BUNDLE

See The Cell Eaters Discovery Channel School's award-winning videos contain on-screen pre- and post-viewing questions. Each video is also supported with online lesson plans at discoveryschool.com.
Understanding: Bacteria—Bacteria now appear on the nightly news. Rampaging, bizarre flesh-eating Group A strep bacteria, immune to our antibiotics, are transforming once-treatable infections into deadly ones. Evolved strains like E. coli wreak panic on the public through inadequately cooked beef products or poorly-stored unpasteurized juices. This video also explores how bacteria aid in meal digestion, help control air- and water-pollution, even how they treat wrinkles and muscle disorders.
Understanding: Viruses—Do your students know their bodies are under attack 24 hours a day? This best-selling video explains how viruses operate and how your immune system defends you against an enemy that's patient, invisible, adaptable, and potentially deadly. Called the "littlest assassins" and "phantom killers," viruses range from the common cold to HIV. See how scientists are turning the tables to win the internal war, transforming invading viruses into agents of healing.
